

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR AN ELECTRONICS AND APPLIANCES SUPPLY CHAIN MANAGEMENT FRAMEWORK

5

ABSTRACT

10 A system, method and computer program product are disclosed for managing an
 electronics and appliances supply chain utilizing a network. A network is utilized to
 receive data from a plurality of electronics and appliances outlets of an electronics and
 appliances supply chain in which the data relates to the sale of electronics and appliances
 by the electronics and appliances outlets. An electronic order form is generated based on
 the data for ordering electronics and appliances from an electronics and appliances
 distributor of the electronics and appliances supply chain. The data is transmitted via the
 15 network to the electronics and appliances distributor of the electronics and appliances
 supply chain. The data is also transmitted to an electronics and appliances supplier of the
 electronics and appliances supply chain utilizing the network. Additionally, activity in
 the electronics and appliances supply chain is forecast utilizing the data.
